

John Kyle Camson

Software Developer | Brisbane, QLD | 0452 204 889 | Jkylecadap@gmail.com

Portfolio.jkylec.dev | github.com/JKCamson | linkedin.com/in/jkcamson

Work Eligibility: Currently eligible for full-time work in Australia

PROFESSIONAL SUMMARY

Recent IT graduate specialising in full-stack development, with industry experience at Orefox building a production mining-shift logging system (offline-first sync, GPS-verified check-ins, real-time supervisor dashboard) and a self-driven portfolio spanning AI tooling, backend systems, and 3D web development. Comfortable owning a feature end-to-end — backend architecture, API design, and deployment — with a strong work ethic developed balancing part-time employment alongside full-time study.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java

Frontend: React, React 18, Three.js, Tailwind CSS, Vite

Backend: Django, Django REST Framework, Django Channels, Node.js, Supabase

Databases: PostgreSQL, PostGIS, Redis, SQL

Tools & Platforms: Git/GitHub, Electron, Anthropic Claude API, Vercel, Postman, RESTful APIs

WORK EXPERIENCE

Software Developer Intern | OrefoxAug 2025 – Oct 2025

- Took ownership of backend architecture and RESTful API development (Django, Django REST Framework) for a production mining-industry shift logging system used by field workers.
- Built offline-first functionality with automatic sync on reconnection, allowing field workers to log shift and incident data without internet connectivity.
- Implemented GPS-verified shift check-ins and safety incident escalation, feeding a real-time supervisor dashboard.
- Debugged and resolved cross-stack issues to improve application stability and data integrity within a 2-developer team.

Project demo: youtube.com/watch?v=kr93w8KO7xE (NDA — source not publicly available)

Housekeeper (Part-time) | Global Hospitality Solutions Pty LtdNov 2023 – May 2026

- Maintained consistent part-time employment throughout full-time IT studies, demonstrating reliability, time management, and the ability to deliver under real-world constraints.

PROJECTS

GAIA — Desktop Overlay Assistant

Electron, Node.js, JavaScript, Anthropic Claude API | Code

- Built a floating desktop assistant that turns natural-language commands into real workflow actions (opening IDEs, terminals, and AI coding tools), powered by the Claude API with a keyword fallback for reliability.

Personal Portfolio — Three.js Space Scene

JavaScript, Three.js, Vite, Supabase, Vercel Serverless Functions | Code

- Developed a scroll-driven 3D portfolio site flying the camera through a real-solar-system layout, backed by Supabase (Postgres, Auth, Storage) and Vercel serverless functions for the contact form, project showcase, and an owner-only admin dashboard.

EDUCATION

- Bachelor of Information Technology — Griffith University 2024 - 2025
- Diploma in Information Technology — Griffith College 2023 - 2024
